

ENGLISH:

BIOVERSAL + REACH (**R**egistration, **E**valuation, **A**uthorization of **C**hemicals)

The production of all BIOVERSAL products already meets the criteria of the new REACH regulation (Registration, Evaluation, Authorization of Chemicals) of the European Union (E.C.), which were published in the Official Journal L 396, 49th year, on September 30, 2006, and come into force by June 02, 2007. The necessary examinations and information of the producer to the supplier as well as to the customer already today correspond to this new and very welcome standard. For the evaluation of damaging, harmless, or environmentally-friendly products REACH is particularly informative for the user. By means of the evaluation of data sheets, under the REACH regulation, products without necessary hazard symbols on the package or danger references are a good alternative to substituting problematic products in use.
